

Classroom Extension, St Michael's Primary School, Stoke Gifford, Bristol

This project for South Gloucestershire Council comprised the development of a single storey extension, together with internal modelling of the existing entrance, to form three new classrooms, group room and connecting corridor.

Built in traditional construction, featuring brick and block external walls, with a concrete tiled roof, external works including new ramped access routes and car park.

The project was undertaken whilst the school remained in operation, which required careful planning and close liaison with the school to minimise disruption and ensure health & safety issues were fully addressed.
