

Victoria Ward, RUH Bath

Completed in 11 weeks, this project comprised the reprovision of the first floor of the Victoria Ward to create an 18 bed ward including new bathrooms and a central nurses' station together with ward administration offices both cellular and open plan. Works involved the provision of new M&E services with medical gases, new floors and ceilings and partitions.

Careful planning and liaison was essential to minimise disruption as patient wards, both above and below remain operational throughout. In addition, access to other areas of the hospital had to be maintained, together with existing services and therefore issues such as deliveries and storage were strictly controlled.
