

Sports Pavilions, Millfield School

The company carries out a wide range of work for Millfield School. Two commissions involved pavilions for the sports fields, which play such a prominent part in the school's curriculum.

The Cricket Pavilion is a futuristic design with a prominent galvanised frame in-filled with glazed elevations. The building is sited between the golf course and the cricket pitch and school activities carried on as construction work progressed. The access road to the site cut across the golf course and facilities were provided to allow the safe passage of pupils from one side to the other.

The project was made possible by generous donations (financial and material) and our project management team were kept busy working with the Architect and Structural Engineer to co-ordinate all the specialist sub-contractors

The Football pavilion was sited in the grounds of a listed country mansion and the barn like architecture (bottom right) was softened by the use of weatherboard cladding and cedar roofing shingles.
